VENTILATION DRYER FOR GEARS

Due to temperature fluctuations between operation and standstill, the air volume in a transmission changes constantly. Sucked, humid ambient air significantly reduces the service life of a gear oil.

Furthermore, moisture in the housing leads to corrosion with particle abrasion and thus damage to the gearbox.

Good transmission ventilation filters prevent the ingress of humidity during the "breathing" of the transmission. GIEBEL Adsorber® are special gear ventilation filters for anhydrous ventilation.

For example, these respiratory dryers are used successfully near the coast, on offshore installations, in tropical regions and underground.

USE OF A BREATHER DRYER

Targets: Drying of sucked, incoming air, avoiding condensation damage

Function: Drying by a desiccant, cleaning of the air by a filter element, protection of the desiccant by frost-proof valves, use of self-regeneration to extend the maintenance intervals

Solution: Dry and filtered air in the hydraulic tank, dew point of up to $-30\text{ }^{\circ}\text{C}$ and residual moisture at approx. 2-20% rh, no damage due to condensation

USE OF AN OIL MIST SEPARATOR

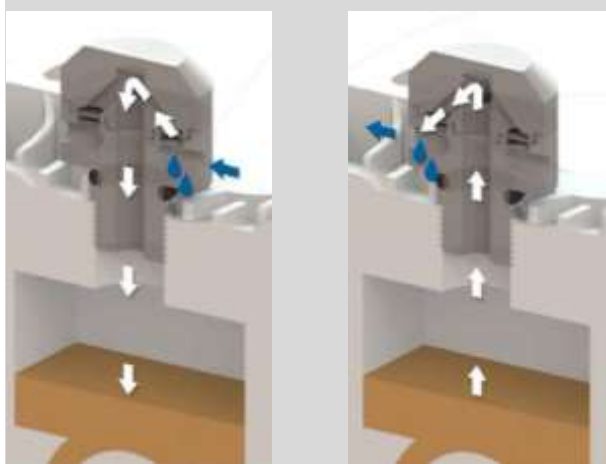

Targets: Protecting the environment from contamination with oil mist, Secondary protection against atmospheric moisture from the ambient air

Function: Binding of larger oil particles, which drops back into the tank due to condensation, adsorption of small particles of oil through activated carbon, drying of the incoming air

Solution: No leakage of oil particles from the hydraulic tank, cleaning of surfaces not necessary, protection of hydraulic oil from humidity.

USE OF A WATER DRP SEPARATOR

Targets: Protection of the gearbox against water entry; Ensuring the free breathing of the transmission

Function: Separation of water droplets and mist, breathing of the gearbox in both directions, no adsorption of humidity

Solution: No inflow of water drops into the transmission, free breathing and no entry of dirt particles

APPLICATIONS

GIEBEL Adsorber® are used for example:

- Turbines & generators in hydroelectric power plants
- Paper machines
- Vertical drilling rigs (Onshore)
- Gears and pumps for offshore drilling rigs
- Gears in sugar processing
- Extruder gearbox for injection molding machines
- Circulation basin in sewage treatment plants
- Ship gearbox / propeller
- Cable cars and ski lifts
- and many more !
